

Paper Cutting Systems

e.g. Paper Cutting Unit

When it is a matter of cutting dough together with the foil or paper beneath it, then you need special solutions. For the paper should not only be cut in beat with the dough, but also normally a bit larger than the area comprised by the dough. Nor should the dough be simply "pushed aside" for this purpose, because such artificial jamming would result in random deformation of the dough piece.

To solve this problem we have consulted the experts and specialists who deal with paper and cutting tasks on a daily basis: paper producers and printing specialists. Their experience and know-how has been incorporated in the paper cutter implemented in and working in conjunction with our guillotine.
