

Custom Configurations

We ***custom design***, engineer and fabricate dough chunking and dough feeding solutions to meet your ***exact*** needs

Elevated Chunker

Feeding onto one incline dough handling belt up into a hopper, with PLC controls or with traditional relay logic. Can be made mobile or on leveling legs.

High Capacity Floor Chunker

High capacity dough hoppers can be custom built above longer dough chunking blades, chunking the dough onto a horizontal dough belt underneath, feeding onto an inclined dough conveyor, into a divider hopper. There can be a twin belted dough elevator, either vertical or inclining, feeding the dough to the production line. The system can be made to traverse under power, traverse manually, or can be fixed.
