***Not available with continuous bag supply system.

- GENERAL**
- All models are available for product infeed from front, rear, or inline.
 - All models are available for product flow through the bagger from right to left, or from left to right. Determine product flow to right or to left standing in front of and facing the control panel.
 - All models may have infeed conveyors interfaced in time with the bagger overhead.
 - All models are available with discharge conveyors arranged for either front, rear, or inline discharge, interfaced in time with the bagger, and providing for installation of optional bag closure device.
 - All models are available in painted or stainless steel finish.

Parts are readily available from stock for new bagger assemblies, or for service and repairs in customer's plant.

TOUCH-PANEL CONTROL

Proven superior design and engineering are combined with the latest computer and electronics systems in the highly efficient, GTS horizontal Bagger.

MULTI WICKET BAG FEED

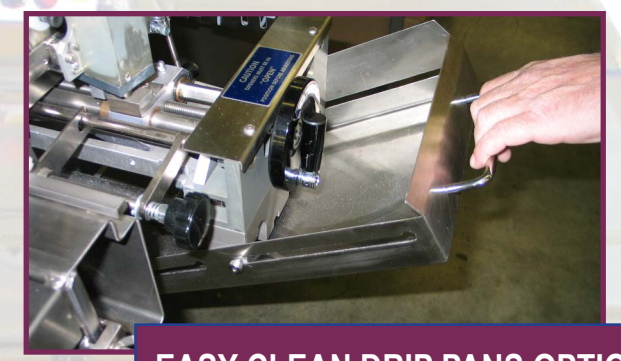

IMPROVED DISCHARGE GUIDES

INNOVATIVE BAG OPENING SYSTEM

Burst of air initiates bag opening, permitting openers to advance and expand the mouth of the bag and hold it open for product insertion.

EASY CLEAN DRIP PANS OPTION
